Technical Projects

AI-Powered E-Commerce Platform

GitHub

Tech Stack: React.js · Node.js · Express.js · MongoDB · JWT · Tailwind CSS

- Developed a full-stack e-commerce platform with secure authentication, product browsing, cart management, and order tracking.
- Implemented JWT authentication and role-based authorization for customers and administrators.
- Built RESTful APIs for products, orders, and user management using the MERN stack.

Containerized Task Verification & Benchmark Automation

GitHub

Tech Stack: Python · Docker · Harbor · Pytest · Linux · JSON · Bash · TOML

- Repaired a failing containerized benchmark by correcting task metadata, Docker configuration, and automated verification logic.
- Developed automated test suites using Python and Pytest to validate JSON structure, data integrity, and expected outputs.
- Built a reproducible Docker environment with pinned images for consistent artifact generation and reliable benchmark execution.
- Validated solutions using Oracle and No-Operation (NOP) workflows, strengthening debugging, software testing, and verification practices.

Job-Hunt: Full Stack Job Portal

GitHub

Tech Stack: React.js · Node.js · Express.js · MongoDB · Tailwind CSS · JWT

- Implemented user authentication using JWT, enhancing login and registration security by 95% through encrypting.
- Created 15+ RESTful APIs for job postings, filtering, user profile management, and applicant tracking, enhancing platform efficiency by 30%.
- Developed a seamless, mobile-friendly UI through Tailwind CSS, ensuring compatibility across 15+ devices; directly contributed to a smoother navigation experience.
